### PROJECTS

Restaurant Inventory System (Bootstrap, PHP, AJAX, jQuery)[Personal]

- Allows a user to enter items, view inventory, change items, create orders
- Features a login system and uses sessions to make data accessible across other pages of the website
- AJAX allows tables to be updated dynamically without page refresh

Google Maps Application (JavaScript, PHP, CSS, XML, MySQL)[Personal]

- Built using Google Maps JavaScript API with a small active user base
- Allows a user to send/update information about map markers
- XML file retrieves marker data through asynchronous JavaScript calls
- Users can add their own marker with custom info. which are deleted in 30 min. intervals
